

DAF Wastewater Treatment System

Case Study Details

Maple Leaf Foods, a major Canadian food processing company, required a treatment system to reduce the contaminants in their wastewater and meet city sewer discharge limits in their effluent.

H2Flow provided two very large DAF (dissolved air floatation) units which processes 200 m³/hr of wastewater. H2Flow also provided two Parkson Rotoshear Rotary Screen units to remove solids out of the wastewater stream.

The design-build engineering and constructor was CRA Contracting & Conestoga-Rovers & Associates.
