

Dissolved Air Flotation Unit Wastewater Treatment System

Case Study Details

A major California based food processing company, required a treatment system for one of their Ontario facilities to reduce the contaminants in their wastewater and meet city sewer discharge limits in their effluent.

H2Flow Equipment Inc. provided a 50 m³/hr Dissolved Air Flotation (DAF) unit complete with pipe flocculator, local control panel and chemical feed systems.

Start-Up: October 2017

H2Flow Ref: Q-244-15
